# Cool Start System

What are the tangible benefits to me as an aircraft owner?

- Reduced operating costs – ultimately result in lower engine maintenance costs.
- Starting with weak batteries – We have solid evidence of normal starts with batteries too weak to start at all without the Cool Start©System.

- Improved cold weather starting – The Cool Start© System has demonstrated that starts at significantly colder temperatures are possible.

- The data is clear — The Cool Start© System will start your turbine engine faster and at lower temperatures every time saving you money!

## Faster, Cooler, Softer Starts mean:

- Lower thermal stress on hot section!
- Prolonged starter life!
- Lower mechanical stress on the accessory gears
- Lower electrical stress on the battery, start relay & the S/G

## Additional Benefits

- Easy to Install
- Lower Maintenance Cost
- STC Approved for all Turbine Powered AG Aircrafts
